Introduction

Who is the book for?

This book has been written for people whose first language is not English, and who use or are going to use computers and other information technology in an English-speaking environment. It covers the language needed to use information technology equipment, work with computer programs, discuss problems and plan projects. It does not cover advanced technical vocabulary for computer programmers or electronic engineers. All the language in the book is intended to be accessible to intermediate level students and above.

How can the book be used?

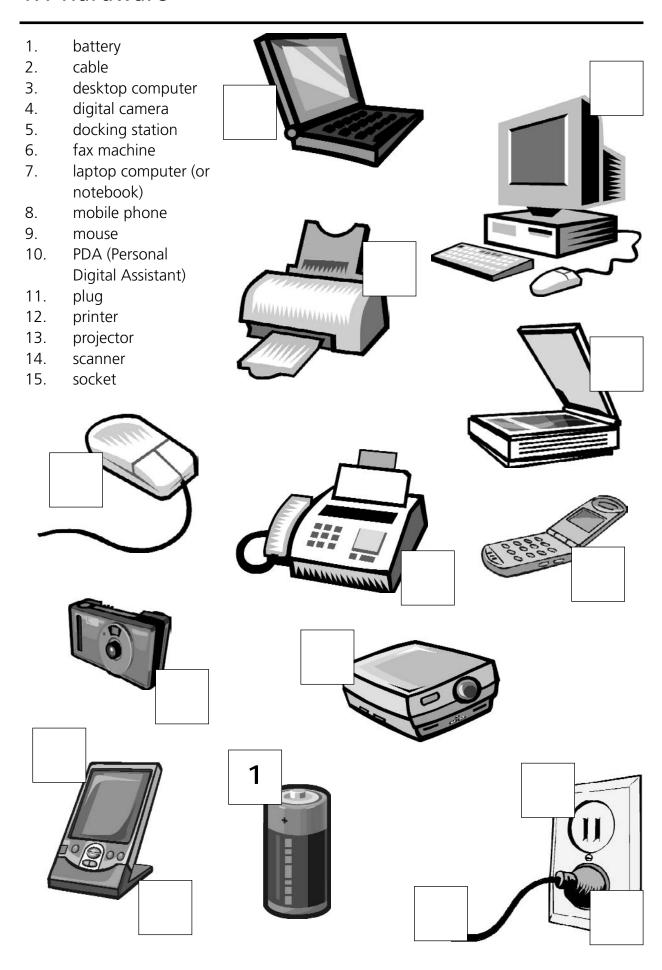

The vocabulary is arranged by topic. Choose the topics that interest you. The pages do not have to be completed in any particular order, and there is no need to complete all the pages if some are on topics which are not useful to you. It is better to complete one or two pages in a day, and remember the vocabulary, rather than completing as many pages as possible. The answers to the exercises can be found at the back of the book. There is also an index to help you find the pages which are most useful to you.

Write new words and phrases you learn in a notebook or file. Review this language regularly so that it becomes part of your active vocabulary.

A good general dictionary will be very helpful, providing pronunciation guides and more contexts. For vocabulary relating specifically to computers, *Dictionary of Computing* (A&C Black, ISBN 978 07475 6622 9) will be a useful reference source.

customising personalizar displayed mostrar performance rendimiento setting up configuración wireless inalámbrico

The control panel provides options for 1 <u>customising</u> the appearance of your computer screen, 2 <u>adding</u> or removing programs and 3 <u>setting up</u> network connections.

When you get a new computer, perhaps the first thing you will want to do is set the date and time. You can also choose the 4_format____ for dates and times. For example, November 4th 2007 can be 5_displayed_ as 04-11-2007, 2007-11-04 or in various other formats.

You may wish to change the desktop 6 background to a picture, for example a personal photo taken on a 7 digital camera. A picture on the desktop background is also known as 8 wallpaper.

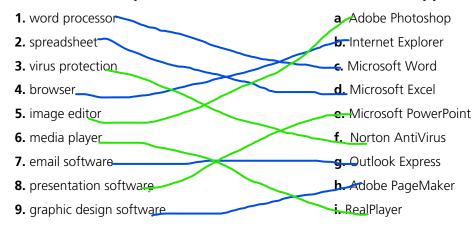

If a computer screen shows the same ⁹ <u>image</u> for a very long time, it can leave a permanent impression. To avoid this, you can choose a ¹⁰ <u>screen save</u>rThis is usually a simple moving pattern which activates if the computer is not used for a set amount of time (for example, five minutes).

You can also use the control panel to set up or change internet and other network connections, including ¹¹ default network connections.

In fact, you can change most aspects of your computer's ¹² properties through the control panel, such as the system ¹³ performance, modem settings, scheduled ¹⁴ task , although most users prefer to leave on the ¹⁵ wireless settings rather than changing them.

Section 3: The Internet

3.1 The internet: the basics

A. Choose the best word from each pair in grey type.

What's the difference between the Web and the internet?

Some people think that the internet and the Web are the same thing, but in fact they are different. The internet (often called simply "the net") is a global ¹ **network / net** of interconnected computers. These computers communicate with each other ² **over / through** existing telecommunications networks – principally, the telephone system. The Word Wide Web (usually known as just "the Web") is the billions of web pages that are stored on large computers called web ³ **servers / services**.

To 4 see / access the web, you need a computer and a modem. You then connect over your telephone line to an internet service 5 port / provider (ISP), which sends your request to view a particular web page to the correct web server.

Websites are not the only service available on the internet. It is also used for many other functions, including sending and receiving email, and connecting to newsgroups and ⁶ discussion / talking groups.

You could say that the internet is a system of roads, and web pages and emails are types of traffic that travel on those roads.

B. Put these operations in the order that you do them (variations are possible).

3.9 Email comprehension 1

Hi Tony

Thanks for sending through that a/w so quickly. Just one problem – I couldn't open the attachment. I'm not sure why. My inbox is virtually empty, so there's plenty of room, and the attachment limit is 20MB, so there's no problem there. Perhaps there was a glitch somewhere. Anyway, rather than trying to figure out what went wrong, could you just send it again?

Did we discuss file format? I don't know much about TIFFs, JPEGs etc, but I meant to tell you that if you have any queries on this, you could get in touch with Steve, our designer. His email address is steve@stevegreendesign.co.uk.

One other thing. When you resend me the a/w, could you cc it to Angela? I've asked her to have a quick look at it before we put it in the brochure.

I'm looking forward very much to seeing those pics – fingers crossed that they'll come through OK this time. However, if I still can't download them, I'll ask you to put them on a disk and mail them.

All the best

Jenny

A. Are these statements true or false?

- 1. Jenny didn't receive the a/w because her inbox is too small.
- 2. The attached files came to less than 20MB in total.
- 3. Jenny has resolved a technical problem, and the attachment will come through without any problems next time.
- 4. Tony will have to resend the a/w.
- 5. Jenny is a graphic design expert
- 6. Tony is also going to put the files onto a disk and mail them.
- 7. Angela has already seen the a/w.
- 8. The style is too informal business emails should always be more formal than this.

B. Find words or expressions in the email which mean the same as the phrases below.

1. artwork

2. a small technical problem	
3. type of file	
4. questions about this	
5. send again	
3. seliu agaili	
6. email a copy to	
7. communicate with	
8. with luck	

3.10 Email comprehension 2

Dear Jenny

As requested, I'm attaching the a/w files again.

The technical problems you've been experiencing may be due to your email provider. I have to say, I've never heard of Whoopydudu.com. You might be better off switching to one of the big names, such as Gmail or Yahoo.

Regarding file formats, TIFFs should be OK. If necessary, your designer will be able to reformat them very easily, but in my experience most designers have no problem working with TIFFs.

As the file sizes are quite large, and I understand that Angela only has a dial-up connection, I've sent her low-res versions to look at. I hope that will be OK. They should be clear enough.

I'm just about to go on holiday, so if you need me to send these files on disk, please let me know by Friday afternoon. I probably won't get the opportunity to check my email while I'm away, but if anything arises that won't keep, my assistant Trevor may be able to deal with it.

Best regards

Tonv

A. Are these statements true or false?

- 1. Tony thinks Jenny should change her email provider.
- 2. The designer will need to reformat the files.
- 3. Angela doesn't have broadband.
- 4. Tony is sending resized versions of the a/w files to Angela.
- 5. These versions will look the same as the original versions.
- 6. Tony is going on holiday on Friday morning.
- 7. Trevor may be able to help with any problems that come up while Tony is away.
- 8. The style is neutral neither formal nor informal.

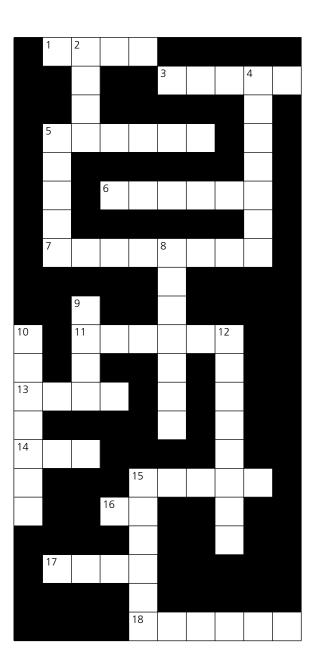

B. Find words or expressions in the email which mean the same as the phrases below.

1. as you asked	
2. famous companies	
3. change the type of file	
4. I think, but I may be wrong	
5. Low image resolution (see 1.6)	
6. on Friday afternoon or before
